

A variety of lamps and bulbs contain toxic heavy metals, such as lead and mercury, that can harm the environment if proper lamp disposal methods are not used. Recycling intact lamps is the most cost-effective way to manage mercury-containing lamps as hazardous waste. Lamp recycling also reduces the risk of mercury vapor release, which can contaminate lakes and streams.

## OVERVIEW

This service provides cost-effective lamp and ballast recycling services to our commercial and industrial customers. Proper disposal of lamps, which can be a costly nuisance, is made simple and convenient.

Through a bulk pricing arrangement with other electric utilities, all members of WPPI Energy, we are able to arrange for pickup service from a reputable recycler of lamps and ballasts.

By taking advantage of this service, business and industrial companies can demonstrate their commitment to environmental responsibility and reduce the amount of hazardous waste in our air and water.
